Brothers Miguel and David Carrasco Barceló share something more than blood ties. Miguel, who graduated from the Elisava School in 1999, has worked for companies such as Faladesa and Infinity Systems. David graduated a year later from the same institution and completed a master's degree in transport design. In 2003 he joined Magma Design, where he carried out various projects until 2009. The studio is the personal project of the two designers.

The TransBook is a netbook designed for AIRIS and comprises a 10-inch (25.4 centimeter) tablet and keyboard. The design perfectly integrates the two parts, with good interaction as well as an agreeable appearance.

These kitchen tongs are a reinterpretation of an everyday object and are designed to stand out from others on the market. The product can be made from various materials, each one offering a different thickness and spring effect.
